## Parkchester No. 1 Cooling Project

Parkchester No. 1 Substation serves the Southeast Bronx network and requires about 6 MW of load relief in the year 2021 to meet the projected demand. The traditional solution will involve the installation of additional cooling systems on two area substation transformers to increase capacity. Currently, Con Edison is performing an engineering review of the project and finalizing the project scope needed to develop the RFP. The details of the network map can be found on the [Company's Hosting Capacity website \(https://www.coned.com/en/business-partners/hosting-capacity\)](https://www.coned.com/en/business-partners/hosting-capacity).
